### First Nations Regional Longitudinal Health Survey

### Enquête Régionale Longitudinale sur la Santé des Premières Nations

### INTRODUCTION

The First Nations Regional Longitudinal Health Survey (RHS) is the only national health survey operated by First Nations, for First Nations. The main objectives of the RHS are to provide scientifically and culturally validated information, while enhancing First Nations capacity and control over research. It is conducted across the ten regions in Canada, surveying participants in over two hundred First Nation communities.

The RHS Phase 2 (2008) is composed of three main survey components

- Adult (age 18 years and over, self-reported)
- **Youth** (age 12-17 years, self-reported)
- Child (age 0-11 years, completed by primary care give)

The RHS is collected using a Computer Assisted Personal Interview (CAPI) system, with over 250 laptops across the country. The data are gathered by trained local field workers, and the survey is conducted in person, within the selected communities. The final versions of the RHS Phase 2 questionnaires were reviewed and approved by the First Nations Information Governance Committee (FNIGC).

### BACKGROUND

The RHS is overseen by the First Nations Information Governance Committee (FNIGC) and is coordinated by ten First Nations regional organizations and a national team housed at the Assembly of First Nations. For the complete list of the RHS Regional Coordinators and related RHS information, please visit our website at <a href="https://www.rhs-ers.ca">www.rhs-ers.ca</a>

The Assembly of First Nations Chiefs Committee on Health mandated that a nation-wide First Nations health survey be implemented every four years, creating the First Nations Regional Longitudinal Health Survey (RHS). The RHS was launched as a pilot survey in 1997 and became the first stepping-stone in First Nations control over research. The RHS has played a pivotal role in the growing awareness of the importance of information and the inherent right for First Nations to exercise self-determination. The RHS collected data in 2002-03 (Phase 1), is currently in the field for data collection in 2008 (Phase 2) and will continue every four years until 2016.

This is our story....RHS is our survey, our voice, our future.
